# THE FUTURE OF LONG-TERM EXPERIMENTS IN AGRICULTURAL SCIENCE

21–23 MAY 2018

**Modern farming owes much to long-standing research that continues to pump out results and to provide valuable perspectives to guide the future of agricultural science.**

This three-day international conference at Rothamsted Research will explore Long-Term Experiments and celebrate the 175<sup>th</sup> anniversary of the start of the first LTE, on Broadbalk field at the site.

“We are uniquely positioned to assess the continuing value of long-term experiments,” says Keith Goulding, the Conference Chair and Rothamsted’s Sustainable Soils Research Fellow.

“We will identify the new questions that need to be asked and how best to go about answering them.”

“Like Rothamsted, the conference will be forward-looking,” says Achim Dobermann, the institute’s Director and Chief Executive. “We will focus on how these experiments can contribute to the sustainable intensification of agriculture in line with the UN’s Sustainable Development Goals.”
