WELCOME
Agri-tech Cornwall is a 3 year, £10m initiative, part-funded by the European Regional Development Fund, to increase Research, Development and Innovation in the Agri-tech sector across Cornwall and the Isles of Scilly. It achieves this through a partnership of the region’s leading stakeholders in agri-tech R&D, innovation and economic development, delivering an intensive, programme of business-focused initiatives, driving RD&I participation across the supply chain.

WHO IS IT FOR?
Agritech Cornwall supports businesses new to RD&I, as well as businesses which have already invested in research. Projects can be large or small.

COLLABORATIVE RESEARCH PROJECTS
Applicants can be from any sector providing the research supports growth, productivity or market development in ‘Agritech’ i.e. the sector providing innovative goods and services for the agriculture, horticulture and food sectors.

EVENTS
We will be holding a range of events over 2019, with priority places available for businesses based in Cornwall. Please see the following pages for our two latest event workshops. We hope to see you there.
A great opportunity to come and learn about a number of grazing livestock projects being carried out at the world leading Rothamsted Research Institute at North Wyke, Devon. The event will cover both sheep and cattle grazing which include multi-species lays, as well as renovated and permanent pastures. These projects are trying to address how we can intensify livestock agriculture in a sustainable way, through real farm solutions. North Wyke would like to welcome farmers, graziers, land owners, contractors and all types of agricultural and environmental consultants to this event. The day will include short presentations and discussions with grazing livestock researchers along with field trial visits and practical demonstrations.

**Agenda**

10:30 Registration & Morning Coffee

10:45 Welcome and introduction to the day
